HOME PRODUCTS

Whether you're already a vacation homeowner or planning to build, it's important to consider your cottage's heating source. An appropriate and properly sized heating appliance can make all the difference in comfort at your home away from home. Just like at home, it's important to be warm at the cottage. Your vacation home should be comfortable. No one wants to spend their vacation feeling too cold or too hot or continually fiddling with the temperature. No matter the size or age of your cottage,

you can make it as cosy and relaxing as you need it.

There are a few things to consider about the heating system or appliance you're using. First, how big is the area you're trying to heat, and how many seasons do you need warmth? Depending on the size, insulation and air tightness of your vacation property, a radiant gas fireplace may be all you need to keep your cottage comfortable. You can heat anywhere from 600 to 2,000 sq. ft. with a Valor Radiant Gas Fireplace. I've seen a 24,000 BTU Valor fireplace as the main heat source in vacation homes more than 2,000 sq. ft.

Valor products are often used as a stand-alone heat source. With no

power required to operate they are also an excellent back-up heat source that is built for use in all seasons. These products are designed to not only look great, but also deliver a constant source of heat at low cost. If you're building a new home or cottage, a Valor fireplace may eliminate your need for a furnace or ductwork, reducing your construction cost significantly.

Bridlewood Home Products is the exclusive distributor for Valor Radiant Gas Fireplaces in the province. Located in Saskatoon, Bridlewood is ready to help you select the heating appliance that will make your cottage ready for any season. ■
